DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed 07 January 2004 has been entered and overcomes the claim objections and rejections of the previous office action.

Drawings

2. The drawings were received on 07 January 2004. These drawings are acceptable.

Allowable Subject Matter

3. Claims 8-11, 14, 16-26, and 28-44 are allowed.
4. The following is an examiner's statement of reasons for allowance: Regarding claims 8-11, 14, and 16-22, applicant has amended independent claim 8 to recite that the diffusion source includes at one of silicon and carbon and comprises at least one of Cl, Br, I, or alloy thereof. This recitation, in addition to other limitations of the claim, is not shown or taught by the prior art of record. Thus, independent claim 8 is allowable. Due to their dependency upon independent claim 8, claims 9-11, 14, and 16-22 are also allowable
5. Regarding claims 23-26 and 28, applicant has amended independent claim 23 to recite that the front surface of the substrate is chemically etched before the diffusion source is disposed. This recitation, in addition to other limitations of the claim, is not shown or taught by the prior art of record. Thus, independent claim 23 is allowable. Due to their dependency upon independent claim 23, claims 24-26 and 28 are also allowable.

6. Regarding claims 29-34, applicant argues that the applied reference (Marine) does not refer to a thickness of a diffusion source as claimed in the instant application. Applicant also points out the importance of the film thickness of the diffusion source being from 5nm to 50nm, as described in paragraph [0089] of the instant application. Applicant's arguments are persuasive. Thus, the prior art of record neither shows or suggests a method for producing an electroluminescent device comprising, in addition to other limitations of the claim, disposing a diffusion source with film thickness from 5nm to 50nm on a front surface of the substrate. Due to their dependency on independent claim 29, claims 30-34 are also allowable.

7. Regarding claims 35-38, applicant has amended independent claim 35 to recite that the front surface of the substrate is chemically etched before the diffusion source is disposed. This recitation, in addition to other limitations of the claim, is not shown or taught by the prior art of record. Thus, independent claim 35 is allowable. Due to their dependency upon independent claim 35, claims 36-38 are also allowable.

8. Regarding independent claim 39, the prior art of record neither shows or suggests an electroluminescence device comprising, in addition to other limitations of the claim, a depth of diffusion not less than $0.3\mu\text{m}$ and not more than $2.0\mu\text{m}$ from the front surface of the substrate. Due to their dependency upon independent claim 39, claims 40-44 are also allowable.

9. The subject diffusion source, as described above, is provided for stably producing an electroluminescence device with superior light emission characteristics. The design is new and unique to the art.

Art Unit: 2879

10. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
